KEY OUTCOMES

Technological results:

- Climate Multi-Hazard modeling tools
- Holistic climate resilience assessment tool
- Portfolio of adaptation solutions
- Decision Support System for adaptation to extreme and compound events with cost-effective measures.

Scientific results:

- Project framework for climate multi-hazard holistic assessment at a regional level
- Regional climate projections in long term considering the local socio-economic dimension
- Methods for mending the data gaps and uncertainty analysis for the risk and impact models
- Climate-related multi-risk tangible impact assessment method
- Multi-risk and resilience assessment for the 3 case studies
- Replication, sustainability and explorations of ICARIA results.
